TEXTILE MANAGEMENT SYSTEM

COMPUTER SCIENCE PROJECT

Submitted in partial fulfillment of the requirement of CBSE, Delhi for the award "Senior Secondary Certificate" in Computer Science for the academic year 2025-2026.

SUBMITTED BY

Name: TANAY AGARWAL

Register No:

UNDER THE GUIDANCE OF

Dr. M.DEEPA LAKSHMI

CERTIFICATE

Certified that this project file is a bonafide work done by

Master : TANAY AGARWAL, S.PRANIT, R.KARTHIKEYAN

Grade : XII

Register No :

Completed during the academic year 2025-2026.

This project file was submitted for the AISSCE (Grade XII) Practical examination in COMPUTER SCIENCE conducted on _____

Subject In charge **Principal**

Signature of the Internal Examiner **Signature of the External Examiner**

ACKNOWLEDGEMENT

At the outset, I would like to express my gratitude to the Almighty, for keeping me in good health all through my school life.

I also, with great pleasure and sincerity record my gratitude to our beloved **Correspondent, DR. NALINI PRABHU SHANKAR** our **Principal**, **Mrs. MAHALAKSHMI,** of Spring Mount Public School, TIRUPUR for allowing me to pursue this project. I place on record my sincere gratitude and appreciation to my project guide **DR. M.DEEPA LAKSHMI** for her kind cooperation and guidance which enabled me to complete this project in time.

I take this opportunity to dedicate my project to all the faculty members who were a constant source of motivation and I express my deep gratitude to their never-ending support and encouragement during this project.

Finally, I thank each and every one who helped me to complete this project.

DECLARATION

I, **TANAY AGARWAL** hereby declare that the project entitled **"TEXTILE MANAGEMENT SYSTEM"** done by me under the guidance of **Dr. M.DEEPA LAKSHMI** is submitted in partial fulfilment of the requirement for the award of senior secondary certificate - CBSE grade XII during the academic year 2025-2026.

TANAY AGARWAL

ABSTRACT

The ***Textile Management System*** is a computer-based application designed to streamline and automate the various processes involved in managing a textile business. This project aims to improve efficiency and accuracy in handling key operations such as inventory management, customer records, supplier details, order processing, and billing.

The system maintains a centralized database that stores all relevant information, enabling quick access, easy updates, and secure storage of data. Features include adding and tracking textile products (like fabric type, quantity, and price), managing sales and purchase records, and generating reports for better decision-making.

Manual management in the textile business often results in errors in record-keeping, duplication of data, and difficulty in accurately tracking inventory. The process is time-consuming and inefficient, especially when dealing with large volumes of orders, customer, and supplier information. Additionally, paper-based records are difficult to update, prone to loss or damage, and make data retrieval cumbersome. Unlike a computerized Textile Management System, manual methods lack real-time insights and reporting capabilities, which can hinder effective decision-making and overall business efficiency.

1. INTRODUCTION

The **Textile Management System (TMS)** is a comprehensive digital solution designed to streamline and optimize the operations within the textile industry. This system aims to manage the entire lifecycle of textile production—from raw material procurement, inventory handling, production planning, quality control, and workforce management to sales and distribution.

Traditionally, textile operations involved multiple manual processes, leading to inefficiencies, data mismanagement, and reduced productivity. A Textile Management System addresses these challenges by automating key processes, ensuring real-time data tracking, enhancing coordination among departments, and improving decision-making.

By integrating various functions like supply chain management, order processing, warehouse management, and customer relationship management, the TMS helps textile companies reduce operational costs, increase productivity, and maintain high standards of quality and compliance.

Whether it's a small-scale textile unit or a large manufacturing enterprise, the Textile Management System plays a vital role in ensuring a smooth, efficient, and scalable business operation in today’s competitive market.

2.NEEDS OF TEXTILE MANAGEMENT SYSTEM

- Helps track raw materials and finished goods efficiently.
- Streamlines the entire textile production workflow.
- Ensures consistent product quality through proper checks.
- Reduces overall operational costs with better planning.
- Centralizes data for easy access and decision-making.
- Automates order processing and delivery tracking.
- Manages employee tasks, shifts, and productivity.
- Improves coordination across the supply chain.
- Enhances customer service.

3. PROJECT SPECIFICATION

MODULE NAME: Buyer Module:

- **BUYER ID** : Unique identifier for each buyer.
- **BUYER NAME**: Name of the customer.
- **SHIPPING ADDRESS**: Address of the customer.
- **EMAIL-ID**: Buyer's email-id(for orders information)
- **GST NUMBER**: For payments.
- **CUSTOMER CONTACT NUMBER**: Contact number of the customer

Operations:

1. **Insert Buyer's Details:**
    - **Purpose**: Adds a customer's details to the database.
    - **Process:**
        - The user is prompted to input **BUYER ID , CUSTOMER NAME , SHIPPING ADDRESS , EMAIL-ID , GST NUMBER**
        - Constructs an SQL `INSERT` statement to add these details into the `Customers` table.
        - Executes the command, commits the transaction, and displays a success message.
2. **Update Buyer's Details:**
    - **Purpose**: Updates the existing details of a customer in the database.
    - **Process:**
        - Requests **BUYER ID** to identify the customer and prompts

for updated values for **NAME**, **ADDRESS,EMAIL,GST NUMBER , CONTACT_INFORMATION**.

- An SQL `UPDATE` statement is generated to modify the customer's record based on **CUSTOMER ID**.
- Executes the command, commits changes, and confirms the update.

3. **Delete Buyer's Details:**
   - **Purpose**: Deletes a Buyer's record from the database.
   - **Process:**
     - Requests **BUYER-ID** for the customer to be removed.
     - Executes an SQL `DELETE` statement to remove the entry.
     - Commits the deletion, displays the number of records deleted, and confirms success.
4. **View Buyer's Details:**
   - **Purpose**: Retrieves and displays all records from the `Customer` table.
   - **Process:**
     - Executes a `SELECT` statement to fetch all customers records.
     - Iterates through each record to display customer details.
5. **Search Buyer's Details:**
   - **Purpose**: Searches for a specific customer by **BUYER-ID**.
   - **Process:**
     - Requests **BUYER-ID** as input.
     - Executes a `SELECT` statement to fetch the customer's record and displays it if found, or notifies if no match is found.

MODULE NAME: Supplier Module

Fields:

- **SUPPLIER-ID**: Unique identifier for each supplier.
- **SUPPLIER NAME**: Supplier's name.
- **CONTACT PERSON NAME**: Contact person's name.
- **CONTACT PERSON NUMBER**: Contact person's number.
- **ADDRESS**: Address of the Supplier.
- **PAYMENT TERMS**: Payment methods.
- **SUPPLIER RATING**: An overall rating of supplier based on service provided.

Operations:

1. **Insert Supplier's details:**
    - **Purpose**: Adds a new supplier's details to the database.
    - **Process:**
        - Prompts for **SUPPLIER-ID , SUPPLIER NAME , CONTACT PERSON NAME , CONTACT PERSON NUMBER , ADDRESS , PAYMENT TERMS , AND SUPPLIER RATINGS**.
        - Constructs an SQL `INSERT` statement to add the details.
        - Executes the command, commits the transaction, and confirms entry.

2. **Update Supplier's details:**
    - **Purpose**: Updates an existing supplier's details in the database.
    - **Process:**

- Requests **SUPPLIER-ID** for identification and allows input for updated values.
- Constructs and executes an SQL `UPDATE` statement.
- Commits the changes and confirms the update.

3. **Delete Supplier's details:**
   - **Purpose**: Deletes a Supplier's record.
   - **Process:**
     - Requests **SUPPLIER-ID** for deletion.
     - Executes an SQL `DELETE` statement and commits the transaction.
     - Confirms deletion by displaying the number of deleted records.
4. **View Supplier's details:**
   - **Purpose**: Retrieves and displays all supplier's details.
   - **Process:**
     - Executes a `SELECT` statement and iterates through each record to display.
5. **Search Supplier's details:**
   - **Purpose**: Searches for supplier's details by **SUPPLIER-ID**.
   - **Process:**
     - Requests **SUPPLIER-ID** and executes a `SELECT` statement to retrieve relevant records.
     - Displays found records or notifies if none exist.

MODULE NAME: Inventory Module:

Fields:

- **PRODUCT-ID**: Unique identifier for each item.
- **PRODUCT-NAME**: Descriptive name of the fabric, yarn, or finished product (eg: T-shirt , shirt etc.)
- **DESCRIPTION**: Detailed information related to item , eg:weight.
- **CATEGORY**: Classification of the item (e.g., fabric, yarn, finished garment, etc.).
- **SIZE**: Size of the item, if applicable (e.g., for finished garments).
- **MATERIAL**: Type of material (e.g., cotton, polyester, silk).
- **FABRIC TYPE**: Specific type of fabric (e.g., denim, jersey, voile).
- **PATTERN/DESIGN**: Details of any patterns or designs on the fabric.

Operations:

1. **Insert product's details:**
    - **Purpose**: Adds a new item's details to the database.
    - **Process:**
        - Prompts for **PRODUCT-ID**, **PRODUCT-NAME**, **DESCRIPTION**, **CATEGORY**, **SIZE**, **MATERIAL**, **FABRIC TYPE**, and **PATTERN/DESIGN**.
        - Constructs and executes an SQL `INSERT` statement.
        - Commits the transaction and confirms the addition.

2. **Update product's details:**
    - **Purpose**: Updates an item's details in the database.
    - **Process:**

- Requests **PRODUCT-ID** and prompts for updated values.
- Executes an SQL `UPDATE` statement and commits changes.
- Displays confirmation upon successful update.

2. **Delete Product's details:**
   - **Purpose**: Deletes a product's record.
   - **Process:**
     - Requests **PRODUCT-ID** and executes an SQL `DELETE` statement.
     - Commits and displays confirmation of records deleted.
3. **View inventory(products) details:**
   - **Purpose**: Retrieves and displays all products details.
   - **Process:**
     - Executes a `SELECT` statement and iterates through each record to display.
4. **Search a product in the inventory:**
   - **Purpose**: Searches for a product by **PRODUCT-ID**.
   - **Process:**
     - Requests **PRODUCT-ID**, executes a `SELECT` statement, and displays the found record(s)

MODULE NAME: Orders Module

Fields:

- **ORDER-ID**: A unique identifier for each order.
- **BUYER-ID:** Unique identifier for each buyer.
- **BUYER NAME**: Name of the buyer.
- **ORDER-DATE**: The date the order was placed.
- **ORDER STATUS**: The current status of the order (e.g., pending,

processing, shipped,delivered,cancelled.)

- **CONTACT INFORMATION**: Phone number, email address, and address.
- **PRODUCT-ID**: The specific textile product or item ordered.
- **QUANTITY**: The number of units of each product ordered.
- **SIZE**: Size of the product ordered.
- **MATERIAL**: Type of material (e.g., cotton, polyester, silk).
- **FABRIC TYPE**: Specific type of fabric (e.g., denim, jersey, voile).
- **PATTERN/DESIGN:** Details of any patterns or designs on the fabric.
- **TOTAL PRICE:** The total cost of the order.
- **SHIPPING ADDRESS:** The address where the order will be delivered.
- **TRACKING NUMBER:** The tracking number for the shipment.

Operations:

1. **Insert Order details:**
    - **Purpose**: Adds new order's details.
    - **Process:**
        - Requests **ORDER-ID , ORDER-DATE , CUSTOMER-ID , CONTACT INFORMATION , PRODUCT-ID , QUANTITY , MATERIAL , FABRIC TYPE , PATTERN , TOTAL PRICE , SHIPPING ADDRESS , and TRACKING NUMBER .**
        - Constructs and executes an SQL `INSERT` statement.
        - Commits and confirms data entry.
2. **Update Order details:**
    - **Purpose**: Updates an existing Orders record.
    - **Process:**

- Requests **ORDER_ID** and allows for updates to relevant fields.
- Executes an SQL `UPDATE` statement and commits.
- Confirms success.

3. **Delete a customer's order:**
   - **Purpose**: Deletes an order record.
   - **Process:**
     - Requests **ORDER-ID** and executes a `DELETE` statement.
     - Confirms deletion by displaying affected records.
4. **View Order details:**
   - **Purpose**: Displays all order details.
   - **Process:**
     - Executes a `SELECT` statement to retrieve all records and displays each.
5. **Search a particular order:**
   - **Purpose**: Searches for order records by **ORDER-ID**.
   - **Process:**
     - Requests **ORDER-ID** and retrieves matching records.

MODULE NAME: Supplier order details Module

Fields:

- **SUPPLIER-ID**: Unique identifier for each supplier.
- **SUPPLIER NAME**: Name of the supplier.
- **ORDER-ID**: A unique identifier for each order.
- **MATERIAL**: Type of material (e.g., cotton, polyester, silk).
- **FABRIC TYPE**: Specific type of fabric (e.g., denim, jersey, voile).
- **SIZE**: Size of the product ordered.
- **QUANTITY**: The number of units of each product ordered.
- **TOTAL COST:** Total price of the order.
- **PATTERN/DESIGN:** Details of any patterns or designs on the fabric.
- **FINE**: Fine amount to be paid , in case of late delivery.
- **SHIPPING ADDRESS**: Address where the order has to be shipped.

Operations:

1. **Insert Supplier order details:**
    - **Purpose**: Adds Supplier order details to the supplier's table.
    - **Process:**
        - Prompts for **SUPPLIER-ID**, **SUPPLIER NAME**, **ORDER-ID**, **MATERIAL**, **FABRIC TYPE**, **SIZE**, **QUANTITY**, **TOTAL COST**, **PATTERN/DESIGN , FINE AND SHIPPING ADDRESS.**
        - Constructs an SQL `INSERT` statement to add the details.
        - Executes the command, commits the transaction, and confirms entry.

2. **Update Supplier order details:**
    - **Purpose**: Updates an existing supplier's order details in the database.
    - **Process:**
        - Requests **SUPPLIER_ID** for identification and allows input for updated values.
        - Constructs and executes an SQL `UPDATE` statement.
        - Commits the changes and confirms the update.
3. **Delete Supplier's order details:**
    - **Purpose**: Deletes a supplier's order details record.
    - **Process:**
        - Requests **SUPPLIER-ID** for deletion.
        - Executes an SQL `DELETE` statement and commits the transaction.
        - Confirms deletion by displaying the number of deleted records.
4. **View Supplier's order details:**
    - **Purpose**: Retrieves and displays all supplier's records.
    - **Process:**
        - Executes a `SELECT` statement and iterates through each record to display.
5. **Search Supplier's order:**
    - **Purpose**: Searches for supplier's order by **SUPPLIER-ID**.
    - **Process:**
        - Requests **SUPPLIER-ID** and executes a `SELECT` statement to retrieve relevant records.
        - Displays found records or notifies if none exist.

MODULE NAME: Employee Module

Fields:

- **NAME**: Full name of the employee
- **ADDRESS**: Residential address of the employee.
- **CONTACT_INFORMATION**: Phone number of the employee.
- **EMAIL**: Email-id of the employee.
- **EMPLOYEE_ID**: Unique identifier for each employee.
- **DEPARTMENT**: The department the employee belongs to.
- **SALARY**: Employee's pay rate or salary information.
- **HIRE DATE:** Date the employee started working.
- **TERMINATION DATE:** Date the employee left the company**.**
- **ATTENDANCE:** Time clock in/out data, including late arrivals, early departures, and breaks.
- **OVERTIME:** Recording of hours worked beyond regular hours.

Operations:

1. **Insert Employee Details**
    - **Purpose**: Adds a new employee's details to the database.
    - **Process:**
        - The user is prompted to input **NAME**, **ADDRESS**, **CONTACT_INFORMATION**, **EMAIL, EMPLOYEE_ID, DEPARTMENT, SALARY , HIRE DATE , TERMINATION DATE, ATTENDANCE , OVERTIME**.
        - Constructs an SQL `INSERT` statement to add these details into the `EmployeeDetails` table.

- Executes the command, commits the transaction, and displays a success message.

2. **Update Employee Details**
   - **Purpose**: Updates the existing details of an employee in the database.
   - **Process:**
     - Requests **EMPLOYEE_ID** to identify the employee and prompts for updated values for **NAME**, **ADDRESS**, **CONTACT_INFORMATION, EMAIL, EMPLOYEE_ID, DEPARTMENT, SALARY, HIRE DATE, TERMINATION DATE, ATTENDANCE,** and **OVERTIME** .
     - An SQL `UPDATE` statement is generated to modify the employee's record based on **EMPLOYEE_ID**.
     - Executes the command, commits changes, and confirms the update.
3. **Delete Employee's Details**
   - **Purpose**: Deletes an employee's record from the database.
   - **Process:**
     - Requests **EMPLOYEE_ID** for the employee to be removed.
     - Executes an SQL `DELETE` statement to remove the entry.
     - Commits the deletion, displays the number of records deleted, and confirms success.
4. **View Employee Details**
   - **Purpose**: Retrieves and displays all records from the `Employee_Details` table.
   - **Process:**
     - Executes a `SELECT` statement to fetch all employees records.

- Iterates through each record to display employees details.

5. **Search Employee Details**
   - **Purpose**: Searches for a specific employee by **EMPLOYEE_ID**.
   - **Process:**
     - Requests **EMPLOYEE_ID** as input.
     - Executes a `SELECT` statement to fetch the employee's record and displays it if found, or notifies if no match is found.

MODULE NAME: Shipping details Module

Fields:

- **ORDER_ID**: Unique identifier for the order.
- **BUYER_ID**: Unique identifier for each buyer.
- **ORDER_DATE**: Date the order has been issued.
- **ORDER_STATUS**: Current status of the order (e.g., pending, shipped, delivered).
- **ITEMS_SHIPPED:** List of items included in the shipment.
- **SHIPPING_ADDRESS:** Complete address where the order is to be delivered.
- **BUYER_CONTACT_INFORMATION:**
- **SHIPPING_METHOD:** Type of shipping service (e.g., standard, express).

Operations:

1. **Insert Order's Shipping Details**

   Purpose: Adds a new order's shipping details to the database.

   Process:

   i. The user is prompted to input **ORDER_ID**, **BUYER_ID**, **ORDER_DATE**, **ORDER_STATUS**, **ITEMS_ SHIPPED , SHIPPING_ ADDRESS , BUYER_**

CONTACT_INFORMATION and **SHIPPING_METHOD**.

ii. Constructs an SQL `INSERT` statement to add these details into the `Shipping_Details` table.

iii. Executes the command, commits the transaction, and displays a success message.

2. Update Order's shipping's Details

Purpose: Updates the existing details of an order's shipping in the database.

Process:

i. Requests **ORDER_ID** to identify the order and prompts for updated values for **BUYER_ID**, **ORDER_DATE**, **ORDER_STATUS** , **ITEMS_SHIPPED** , **SHIPPING_ADDRESS , BUYER_ CONTACT_INFORMATION** and **SHIPPING_METHOD**.

ii. An SQL `UPDATE` statement is generated to modify the shipping order's record based on **ORDER_ID**.

iii. Executes the command, commits changes, and confirms the update.

3. Delete Order's shipping's Details

Purpose: Deletes an order's shipping record from the database.

Process:

i. Requests **ORDER_ID** for the order to be removed.

ii. Executes an SQL `DELETE` statement to remove the entry.

iii. Commits the deletion, displays the number of records deleted, and confirms success.

4. View Shipping Details

Purpose: Retrieves and displays all records from the

`ShippingDetails` table.

Process:

i. Executes a `SELECT` statement to fetch all shipping records.

ii. Iterates through each record to display shipping details.

5. **Search Shipping Details**

Purpose: Searches for a specific order by **ORDER_ID**.

Process:

i. Requests **ORDER_ID** as input.

ii. Executes a `SELECT` statement to fetch the order's shipping details record and displays it if found, or notifies if no match is found.

MODULE NAME: Payment details Module

Fields:

- **ORDER_ID**: Unique identifier for the order.
- **ORDER_DATE**: Date the order has been issued.
- **DUE DATE**: Date payment is expected.
- **TOTAL AMOUNT:** The total cost of the order
- **PAYMENT METHOD:** The method of payment used (e.g., credit card, bank transfer).
- **PAYMENT STATUS:** Whether the payment is pending, paid, or partially paid.
- **SHIPPING_METHOD:** Type of shipping service (e.g., standard, express).
- **FINE:** Fine amount to be paid , in case of late delivery.
- **REMAINING PAYMENT:** The leftover payment of the order to be paid.

Operations:

1. **Insert Payment Details**

Purpose: Adds a new order's payment details to the database.

Process:

i. The user is prompted to input **ORDER_ID**, **ORDER_DATE**, **DUE_DATE**, **TOTAL_AMOUNT , PAYMENT METHOD , PAYMENT STATUS , SHIPPING METHOD , FINE and REMAINING_PAYMENT**

ii. Constructs an SQL `INSERT` statement to add these details into the `Payment_Details` table.

iii. Executes the command, commits the transaction, and displays a success message.

2. Update Payment Details

Purpose: Updates the existing details of an order's payment in the database.

Process:

i. Requests **ORDER_ID** to identify the order and prompts for updated values for **ORDER_DATE**, **DUE_DATE**, **TOTAL_AMOUNT , PAYMENT METHOD , PAYMENT STATUS , SHIPPING METHOD , FINE** and **REMAINING_PAYMENT**

ii. An SQL `UPDATE` statement is generated to modify the payment's record based on **ORDER_ID**.

iii. Executes the command, commits changes, and confirms the update.

3. Delete Payment Details

Purpose: Deletes an order's payment's record from the database.

Process:

i. Requests **ORDER_ID** for the order to be removed.

ii. Executes an SQL `DELETE` statement to remove the entry.
iii. Commits the deletion, displays the number of records deleted, and confirms success.

4. View Payment Details

Purpose: Retrieves and displays all records from the `Payment_Details` table.

Process:

i. Executes a `SELECT` statement to fetch all shipping records.
ii. Iterates through each record to display shipping details.

5. Search Payment Details

Purpose: Searches for a specific payment by **ORDER_ID**.

Process:

i. Requests **ORDER_ID** as input.
ii. Executes a `SELECT` statement to fetch the order's shipping details record and displays it if found, or notifies if no match is found.

4. HARDWARE AND SOFTWARE REQUIREMENTS

MINIMUM HARDWARE REQUIRED:

- Processor: Intel Core i5 or equivalent (minimum 2.4 GHz or higher).
- RAM: 8 GB or more (to efficiently run MySQL and Python applications).
- Hard Disk: 512 GB or larger (for ample storage of databases, files, and project data).
- Monitor: 13-inch or larger, with at least 1024x768 resolution (VGA or better).
- Any standard mouse and Keyboard.

SOFTWARE REQUIRED:

- MySQL
- Operating system: Windows
- Python 3.8.5

5.IMPORTED MODULES

In "***Textile Management System***" project, MySQL. Connector module is used to connect python with MySQL tables. MySQL Connector enables Python programs to access MySQL databases, using an API that is compliant with the Python Database API Specification v2.0 (PEP 249). It is written in pure Python and does not have any dependencies except for the Python Standard Library. The connect () function creates a connection to the MySQL server with python and returns a MySQL Connection object. These are the following arguments required for the MySQL server to perform the connection from Python:

Argument	Description
Username	The username that you use to work with MySQL Server. The default username for the MySQL database is a **root**.
Password	Password is given by the user at the time of installing the MySQL server. If you are using root then you won't need the password. Here it is **VK@18.**
Host name	The server name or IP address on which MySQL is running. if you are running on localhost, then you can use **localhost** or its IP 127.0.0.0
Database name	The name of the database to which you want to connect and perform the operations, which is **Textile_ management_system abbreviated as tms** Here.

STEPS TO IMPORT MODULES:

1. We have imported MySQL connecter module using the import mysql.connector statement to communicate with the MySQL database.

2. We have made use of the connect () method which is in the MySQL Connector package with the required arguments to connect MySQL. It would return MySQLConnection object if the connection is established successfully.

3. We use the cursor() method of a MySQLConnection object to create a cursor object to perform various SQL operations.

4. The execute () method is used here to run the SQL query and return the result.

5. We have used cursor.fetchall() or fetchone() or fetchmany() to read the query results.

6. We are making use of connection.close() method to close the open connections once after the work gets completed.

6. MODULES AND DESCRIPTION

The following are the modules of the **Textile Management System**:

1. **Buyer Details Table**
2. **Supplier Details Table**
3. **Inventory Table**
4. **Order Details Table**
5. **Supplier Order Details Table**
6. **Employee Details Table**
7. **Shipping Details Table**
8. **Payment Details Table**

The following are the description of the operations carried out for all the modules.

1. BUYER DETAILS MODULE:

Purpose:

To maintain and manage the database of all buyers, including their contact information, GST number, and shipping details.

Fields:

1) **BUYER_ID**
2) **BUYER_NAME**
3) **SHIPPING_ADDRESS**
4) **EMAIL_ID**
5) **GST_NUMBER**
6) **BUYER_CONTACT_INFORMATION**

Operations:

1) **Insert Buyer Details:** Adds a new buyer's information into the database.
2) **Update Buyer Details:** Modifies existing buyer records based on BUYER_ID.
3) **Delete Buyer Details:** Removes a buyer record permanently from the database.
4) **View Buyer Details:** Displays all stored buyer records.
5) **Search Buyer Details:** Retrieves details of a particular buyer by BUYER_ID.

2. SUPPLIER DETAILS MODULE:

Purpose:

To manage supplier-related data including contact information, payment terms, and ratings.

Fields:

1) **SUPPLIER_ID**
2) **SUPPLIER_NAME**
3) **CONTACT_PERSON_NAME**
4) **CONTACT_PERSON_NUMBER**
5) **ADDRESS**
6) **PAYMENT_TERMS**
7) **SUPPLIER_RATING**

Operations:

1) **Insert Supplier Details:** Records new supplier information.
2) **Update Supplier Details:** Updates supplier data based on SUPPLIER_ID.
3) **Delete Supplier Details:** Deletes supplier details from the database.
4) **View Supplier Details:** Displays all supplier data.
5) **Search Supplier Details:** Fetches information of a specific supplier.

3. INVENTORY MODULE

Purpose:

To maintain product-related information such as fabric type, material, size, and pattern, ensuring smooth inventory management.

Fields:

1) **PRODUCT_ID**
2) **PRODUCT_NAME**
3) **DESCRIPTION**
4) **CATEGORY**
5) **SIZE**
6) **MATERIAL**
7) **FABRIC_TYPE**
8) **PATTERN**

Operations:

1) **Insert Inventory Details:** Adds product data into the inventory table.
2) **Update Inventory Details:** Modifies existing product records.
3) **Delete Inventory Details:** Deletes a product from the inventory.
4) **View Inventory Details:** Displays all available products.
5) **Search Inventory Details:** Searches for a product using PRODUCT_ID.

4. ORDERS MODULE

Purpose:

To manage orders placed by buyers, including details about the ordered items, quantity, pricing, and shipping address.

Fields:

1) **ORDER_ID**
2) **BUYER_ID**
3) **BUYER_NAME**
4) **ORDER_DATE**
5) **ORDER_STATUS**
6) **CONTACT_INFORMATION**
7) **PRODUCT_ID**
8) **QUANTITY**
9) **SIZE**
10) **MATERIAL**
11) **FABRIC_TYPE**
12) **PATTERN**
13) **TOTAL_PRICE**
14) **SHIPPING_ADDRESS**

15) TRACKING_NUMBER

Operations:

1) **Insert Order Details:** Adds new customer orders into the database.
2) **Update Order Details:** Updates details of existing orders.
3) **Delete Order Details:** Deletes specific order records.
4) **View Order Details:** Displays all order entries.
5) **Search Order Details:** Searches for an order using ORDER_ID.

5. SUPPLIER ORDER DETAILS MODULE

Purpose:

To handle orders placed with suppliers, including the supply of raw materials or finished goods.

Fields:

1) **SUPPLIER_ID**
2) **SUPPLIER_NAME**
3) **ORDER_ID**
4) **MATERIAL**
5) **FABRIC_TYPE**
6) **SIZE**
7) **QUANTITY**
8) **TOTAL_COST**
9) **PATTERN**
10) **FINE**
11) **SHIPPING_ADDRESS**

Operations:

1) **Insert Supplier Order Details:** Adds supplier order records.
2) **Update Supplier Order Details:** Updates existing supplier order information.
3) **Delete Supplier Order Details:** Removes supplier order records.
4) **View Supplier Order Details:** Displays all supplier order records.
5) **Search Supplier Order Details:** Finds supplier order data using SUPPLIER_ID.

6.EMPLOYEE DETAILS MODULE

Purpose:

To manage employee information, department assignments, and payroll-related data.

Fields:

1) **NAME**
2) **ADDRESS**
3) **CONTACT_INFORMATION**
4) **EMAIL**
5) **EMPLOYEE_ID**
6) **DEPARTMENT**
7) **SALARY**
8) **HIRE_DATE**
9) **TERMINATION_DATE**
10) **ATTENDANCE**
11) **OVERTIME**

Operations:

1) **Insert Employee Details:** Adds a new employee record.
2) **Update Employee Details:** Updates details such as salary or department.
3) **Delete Employee Details:** Deletes an employee record.
4) **View Employee Details:** Displays all employee data.
5) **Search Employee Details:** Searches for employee details by EMPLOYEE_ID.

7.SHIPPING DETAILS MODULE

Purpose:

To record shipping-related data, ensuring order tracking and timely delivery.

Fields:

1) **ORDER_ID**
2) **BUYER_ID**
3) **ORDER_DATE**
4) **ORDER_STATUS**
5) **ITEMS_SHIPPED**
6) **SHIPPING_ADDRESS**
7) **BUYER_CONTACT_INFORMATION**
8) **SHIPPING_METHOD**

Operations:

1) **Insert Shipping Details:** Adds a new shipping record.
2) **Update Shipping Details:** Updates existing shipping information.
3) **Delete Shipping Details:** Removes a shipping entry.
4) **View Shipping Details:** Displays all shipping data.
5) **Search Shipping Details:** Searches for shipping information using ORDER_ID

8.PAYMENT DETAILS MODULE

Purpose:

To handle financial transactions and track order payments, due dates, and penalties.

Fields:

1) **ORDER_ID**
2) **ORDER_DATE**
3) **DUE_DATE**
4) **TOTAL_AMOUNT**
5) **REMAINING_PAYMENT**
6) **PAYMENT_METHOD**
7) **PAYMENT_STATUS**
8) **SHIPPING_METHOD**
9) **FINE**

Operations:

1) **Insert Payment Details:** Adds a new payment entry.
2) **Update Payment Details:** Updates payment-related information.
3) **Delete Payment Details:** Deletes an existing payment record.
4) **View Payment Details:** Displays all payment data.
5) **Search Payment Details:** Searches for payments by ORDER_ID.

7.TABLE DESCRIPTIONS

BUYER_DETAILS

```
mysql> DESC BUYER_DETAILS;

10.FUTURE SCOPE

The future scope of textile management is vast and rapidly evolving, driven by advancements in technology, sustainability, and global market demands. As the industry embraces digital transformation, textile management systems are expected to integrate with smart manufacturing technologies such as IoT, AI, and machine learning, enabling real-time monitoring, predictive analytics, and efficient resource utilization. Sustainability will play a crucial role, with systems focusing on minimizing waste, tracking carbon footprints, and ensuring eco-friendly practices. Cloud-based platforms will allow remote and scalable operations, while integration with supply chain and ERP systems will streamline processes from raw material sourcing to product delivery. Additionally, the rise of e-commerce and customization will push textile managers to adopt flexible, customer-centric production models. Compliance with labor laws, environmental standards, and global regulations will also become more manageable through advanced management tools. Overall, textile management is moving toward a smarter, greener, and more connected future.
